F - WALL BRACKETS 0°

F - WALL BRACKETS 90°

F - WALL BRACKETS 30°

A - CROSS BASE CHROME - This heavy duty chrome plated steel base a great looking flag base and is used where a professional look is required. It folds up for convenience and features ball bearings which allow the flag to move freely 360 degrees.

B - CROSS BASE CHROME – Featuring a brass insert which allows the flag to move 360 degrees, this heavy duty chrome plated steel base is used for a professional look. It folds up small for convenience.

C - CROSS BASE PAINTED - This inexpensive but attractive grey painted steel base is designed primarily for indoor use. Ball bearings allow the flag to move freely 360 degrees. Legs swivel closed when not in use. Works with a water bag .

D - WATER BAG – Designed to work with all cross base and flat bases, the water bags adds weight to help keep a flag grounded in really windy conditions. Simply open the valve in the bag and fill with water.

E - SPIKE BASE - This chrome plated spike base is the most popular base for exterior applications at beaches, fairs and in front of businesses. They need to be hammered into the ground. Ball bearings allow the flag to move freely 360 degrees.

F - WALL BRACKETS - Need to attach a flag in a more permanent way than with a spike or cross base? These metal brackets are used to attach flags to walls, floors and roofs at various angles for temporary or permanent high exposure applications.
